Radiation Resistant Low-Profile LED Linear Luminaire

Zero-Maintenance Driverless Design

Connects directly to AC line voltage without an LED driver or electrolytic capacitors, for extreme reliability and lifetime.

Radiation Resistant Construction

Radiation-resistant technologies leveraging Gallium Nitride (GaN) avoid the use of traditional silicon semiconductor devices like MOSFETs, which are vulnerable to radiation damage. Instead, they utilize advanced materials with high threshold displacement energy, such as GaN and Silicon Carbide (SiC), ensuring superior durability and performance in high-radiation environments.

Compact, Low-Profile, Round Design

The patented linear housing provides a slim, low-profile allowing installation in almost any application. The design is lightweight, incredibly easy to mount and creates modern, sleek result.
